

QUASAR FOR ENTERPRISE SOFTWARE

TypeScript, Jest and Cypress
integration without the hassle

WHO I AM

Paolo Caleffi

- Class 1992, Italy
- Computer engineer
- Dreamonkey founder
- Full-stack developer
- Quasar core team member,
TypeScript support

DREAMONKEY IN SHORT

Dreamonkey Srl
develops web apps
and digital integrations
for companies.

We put effort into creating
a more evolved world,
where technology supports
companies, designing
**performant, reliable, simple
and enjoyable web apps,**
which make managers'
and employees' lives better.

OUR USE CASE

- Dreamonkey works for enterprises
- Enterprises-level software benefit from the usage of:
 - **TypeScript** (compile-time type checking);
 - **Jest** (unit tests);
 - **Cypress** (e2e tests).

The logo consists of a solid blue square containing the white letters 'TS' in a bold, sans-serif font. The 'T' and 'S' are closely spaced.

TS

TYPESCRIPT

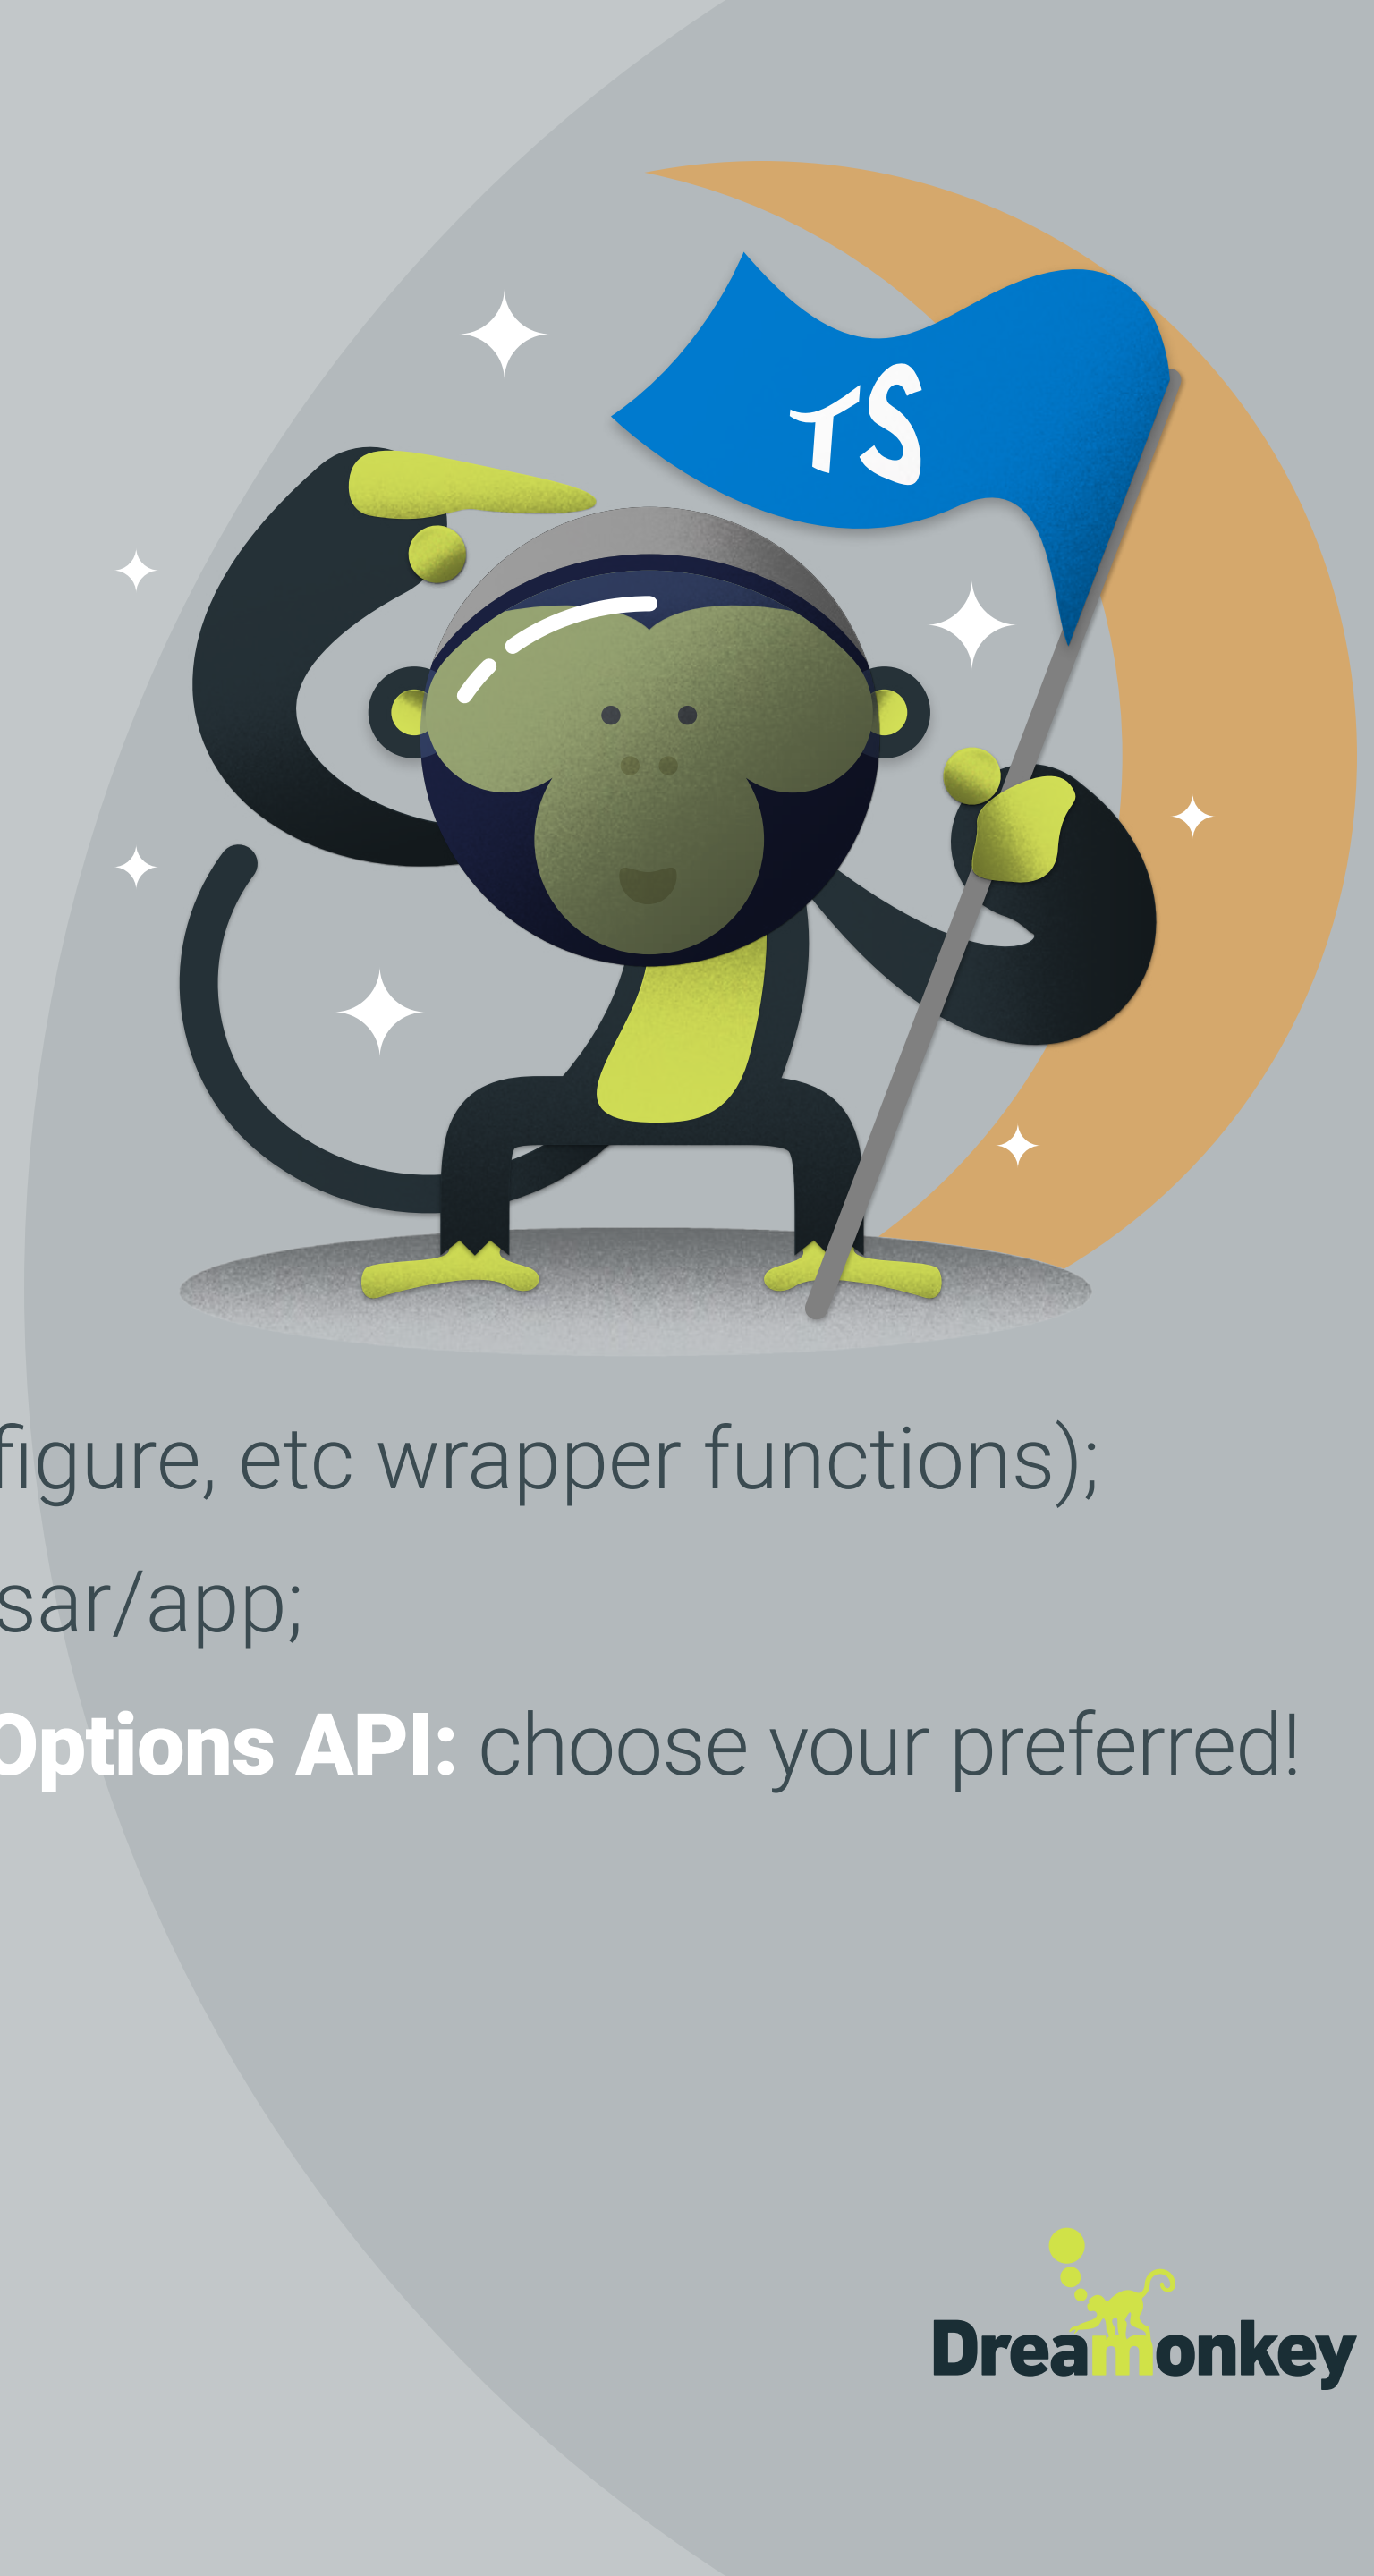

WHY?

- Static type checking
- Static types
- ... but *flexible*
- ... and help avoiding typos

WHAT'S NEW?

- End of 2019:
 - **UI typings generated from JSON API.**
- Mid 2020:
 - **Added typings related to @quasar/app** (boot, configure, etc wrapper functions);
 - **Compatible TypeScript version** provided by @quasar/app;
 - **Starter kit integration with Composition, Class or Options API:** choose your preferred!
 - ... and much more!
- Next steps:
 - **Progressive migration of UI codebase to TS;**
 - **Documentation extracted from TSDocs.**

HOW TO?

■ New projects:

```
quasar create my-ts-project  
and chose TypeScript support option
```

■ Existing projects
(automatic):

ENSURE YOU CAN ROLLBACK
checkout the docs [\[link\]](#)

```
quasar ext add @quasar/typescript  
manual adjustments (expect some bumps)
```

TypeScript

■ Existing projects (manual/
enhance current project):

- `supportTS: true` into `quasar.config.js`;
- create `tsconfig.json` as indicated into docs
<https://quasar.dev/quasar-cli/supporting-ts>.

■ Existing projects
(manual/start anew):

- Create new project;
- Manually copy over needed files;
- Pray your preferred deity.

■ **TypeScript official
documentation:**

<https://www.staging-typescript.org/docs/home>

JEST

WHY?

- Unit tests
- Improve stability at component level
- Spot edge cases in advance
- Improve overall code quality

WHAT'S NEW?

- TypeScript support (**beta**)
- Revamped and fully typed “mountQuasar” helper (**soon to come**)

HOW TO?

```
quasar ext add @quasar/testing-unit-jest@beta
```

Jest official documentation

<https://jestjs.io/docs/en/getting-started>

CYPRESS

WHY?

- e2e tests
- Guarantee stability of critical features at system level
- Classical example: perform login, navigate all pages, perform logout

WHAT'S NEW?

- TypeScript support (**beta**)
- Updated dependencies (**beta**)
- First stable release (**soon to come**)

HOW TO?

```
Quasar ext add @quasar/testing-e2e-cypress@beta
```

Cypress official documentation

<https://docs.cypress.io/guides/overview/why-cypress.html#In-a-nutshell>

TODAY WE LEARNED...

- TypeScript
- Jest
- Cypress
- We manage the integration /
you learn and use the techs
you like

DO YOU <3 QUASAR AS WE DO?

■ Start a monthly donation

With \$\$ (pretty-please your boss for this)

With your time (aka “help us fixing bugs and creating repros”)

■ Sponsor a new feature’s development

Evolution in motion
